

Environmental Policy Statement

It is the policy of FP McCann to undertake its operations as a construction works, quarry, supplier of aggregates, producer of coated stone, ready mixed concrete and precast concrete products in a manner that is least detrimental to the environment both inside and outside the premises and to comply with the relevant legislation, codes of practice and guidance notes.

We are committed to promoting, and seek to continually improve, continual reduction of pollution, reduction of waste, and to recovery and recycling, as opposed to disposal, where feasible. Staff training in environmental probity is central to achieving our aims.

Management are committed to providing and maintaining adequate financial and physical resources to implement training of personnel and equipment to reduce the impact on the environment.

We maintain an environmental management system, which sets our environmental targets for all of our relevant activities. These targets and the results of our environmental management system will be made available to interested parties on request. It is our aim to support these targets by maintaining third party corroboration of the success of our environmental management system in the form of certification to ISO 14001.

Best Available Technology (BAT) will be employed where construction works can affect the environment. These decisions are based on professional advice and close liaison with relevant authorities and agencies to minimise the impact.

Our environmental policy is communicated to our employees and copies are available to the public on request.
